

Balancing Adapters

ITS BORE is a modular, high precision toolholder system for boring, milling, drilling and tapping applications that provides an extremely high degree of rigidity.

The system's flexibility and simplicity make it suitable for machine tools, machining centers and flexible manufacturing systems.

It uses a unique cylindrical-conical coupling and radial expanding pin to ensure maximum rigidity and concentricity.

For applications that require machining to strict tolerances with a superior surface finish, **ITS BORE** is an excellent solution. The system is available with an internal coolant supply for all of its components
